

I CLAIM:

1. A holder fuse device comprising:
 - a base,
 - two planar conductor blades secured to said base and extended
- 5 outward of said base,
 - each of said planar conductor blades including a groove formed therein and defined between two ears, and including an opening formed therein and communicating with said groove thereof, said groove of each of said planar conductor blades including a width
 - 10 smaller than that of said opening of said planar conductor blades, and
 - 15 a fuse member including two ends engaged into said opening of said planar conductor blades via said grooves of said planar conductor blades, said ends of said fuse member including a diameter greater than that of said opening of said planar conductor blades, to secure and retain said ends of said fuse member in said opening of said planar conductor blades.
- 20 2. The holder fuse device as claimed in claim 1, wherein each of said planar conductor blades includes a conductor extension extended out of said base.
3. The holder fuse device as claimed in claim 1 further comprising a cover secured to said base, to shield said fuse member and said planar conductor blades.
